1. Dissolve ingredients (except cysteine, magnesium chloride, calcium chloride and vitamins), bring medium to the boil, then cool to room temperature under 100% N₂ gas atmosphere. Thereafter, add and dissolve cysteine, adjust pH to 6.5 and dispense under same gas atmosphere into anoxic Hungate-type tubes or serum vials and autoclave. After sterilization add magnesium chloride and calcium chloride from sterile anoxic stock solutions autoclaved under 100% N₂ gas and vitamins from a filter-sterilized stock solution prepared under N₂ gas.

2. Note: For agar medium add 20.00 g/l agar, 5.00 g/l CaCO₃, and 2.00 g/l soluble starch.
