

## 115: VIBRIO NATRIEGENS MEDIUM

This recipe contains strain-specific modifications for *Vibrio parahaemolyticus* DSM 15477 \*

Final pH: 7.0

Final volume: 1000 ml

Peptone	5.00	g
Meat extract	3.00	g
NaCl	1.50	%
Agar, if necessary	15.00	g
Distilled water	1000.00	ml

Adjust pH to 7.0. For *Bacillus* strains the addition of 10.0 mg  $\text{MnSO}_4 \times \text{H}_2\text{O}$  is recommended for sporulation.

\* Rehydrate and grow lyophilized cells from the ampoule in 5 ml liquid broth 115.  
Subsequent subculturing may be carried out in liquid medium or on agar plates
