Dissolve ingredients (except bicarbonate, trimethylammonium chloride, vitamins, cysteine and sulfide), sparge medium with 80% N<sub>2</sub> and 20% CO<sub>2</sub> gas mixture for 30 - 45 min to make it anoxic. Add and dissolve bicarbonate and adjust pH to 6.8, then dispense medium under 80% N<sub>2</sub> and 20% CO<sub>2</sub> gas atmosphere into anoxic Hungate-type tubes or serum vials to 30% of their volume and autoclave. After sterilization add trimethylammonium chloride, cysteine and sulfide from sterile anoxic stock solutions autoclaved under 100% N<sub>2</sub> gas atmosphere. Vitamins are prepared under 100% N<sub>2</sub> gas atmosphere and sterilized by filtration. Adjust pH of complete medium to 7.0 - 7.4, if necessary.

\* Replace trimethylammonium chloride with 10.00 ml/l methanol solution (50% v/v) added to the autoclaved medium from a sterile anoxic stock solution. Adjust pH of complete medium to 6.8 - 7.2.
