

1: NUTRIENT AGAR

This recipe contains strain-specific modifications for *Pseudomonas moorei* DSM 12647 *

Final pH: 7.0

Final volume: 1000 ml

Peptone	5.00	g
Meat extract	3.00	g
Agar, for solid medium	15.00	g
Distilled water	1000.00	ml

1. Adjust pH to 7.0.
2. For Bacillus strains the addition of 10.0 mg $\text{MnSO}_4 \times \text{H}_2\text{O}$ is recommended for sporulation.

* Rehydrate and grow freeze-dried material from the ampoule in liquid medium 1. Subsequent subculturing may be carried out on medium 1 agar plates or in mineral medium with salicylate.
