

## 1: NUTRIENT AGAR

This recipe contains strain-specific modifications for *Anoxybacillus kamchatkensis subsp. asaccharedens* DSM 18475 \*

Final pH: 7.0

Final volume: 1000 ml

Peptone	5.00	g
Meat extract	3.00	g
Agar, for solid medium	15.00	g
MnSO <sub>4</sub>	10.00	mg/l
Distilled water	1000.00	ml

1. Adjust pH to 7.0.
2. For Bacillus strains the addition of 10.0 mg MnSO<sub>4</sub> x H<sub>2</sub>O is recommended for sporulation.

\* Plus 10mg/l MnSO<sub>4</sub>
