

## 1a: REACTIVATION WITH LIQUID MEDIUM 1

This recipe contains strain-specific modifications for *Dyadobacter jejuensis* DSM 100346 \*

Final pH: 7.0

Final volume: 1000 ml

1. Rehydrate and grow lyophilized cells from the ampoule in 5 ml liquid broth 1. Subsequent subculturing may be carried out in liquid medium or on agar plates.

|                        |         |     |
|------------------------|---------|-----|
| Peptone                | 5.00    | g   |
| Meat extract           | 3.00    | g   |
| Agar, for solid medium | 15.00   | g   |
| NaCl                   | 5.00    | g/l |
| Distilled water        | 1000.00 | ml  |

2. Adjust pH to 7.0. For Bacillus strains the addition of 10.0 mg  $\text{MnSO}_4 \times \text{H}_2\text{O}$  is recommended for sporulation.

\* Plus 5g/l NaCl
